Kinds & Methods of Depreciation

- Straight Line Method
- Diminishing Balance Method
- Sum of the Annuity Method
- Depreciation Fund Method
- Annual valuation Method

नेपाल राष्ट्र बैंक- सहायक द्वितीय पदको पाठ्यक्रममा आधारित

@Prajwal Ghimire

- Per Hour and Per Production Method
- Evaluation Method

Straight Line Method

- Depreciation = (Total cost – Scrap Value)/Life of the Assets
- Example: Cost=80000, Carriage = 20000, Scrap Value = 10000, Life = 5 Years, Then Depreciation = ?

Where, total cost = 80000 + 20000 = 100000

Diminishing Balance Method

- Depreciation गर्दा हरेक वर्ष हासकट्टी गरी प्राप्त हुने Reducing Balance का आधारमा Depreciation गरीने,
- यसमा Depreciation Rate दिएको हुनुपर्ने
- Depreciation Rate नदिएको खण्डमा निम्न Formula बाट Rate निकाल्नुपर्छ।
 - Rate = $1/n \times 100$, where n= life
 - Or, Rate = $1 - n \text{ root under Salvage value/Cost of Machine}$
 - Or, Rate = $1 - \text{root under Scrape value/cost of machine}$

Sum of the Annuity Method

- यस विधिबाट Depreciation निकाल्दा वर्षहरूको योग निकालिन्छ।
- उदाहरण: if life = 4 years Then, वर्षहरूको जोड = $4+3+2+1 = 10$

नेपाल राष्ट्र बैंक- सहायक द्वितीय पदको पाठ्यक्रममा आधारित

@Prajwal Ghimire

- Depreciation of first year = $4/10 * \text{cost of machine}$
- Depreciation of second year = $3/10 * \text{cost of machine}$
- Depreciation of third year = $2/10 * \text{cost of machine}$
- Depreciation of 4th year = $1/10 * \text{cost of machine}$

Depreciation Fund Method

- हरेक वर्ष Depreciation बाट प्राप्त रकम छुट्टै Fund बनाएर बैकमा जम्मा गरिने
- यो विधिबाट Depreciation को लेखा राख्दा २ वटा Account को प्रयोग गरिने
- कुनै पनि विधि यसमा प्रयोग गर्न सकिने
- २ वटा Account
 - Depreciation or machinery account
 - Depreciation Fund Account

Annual valuation Method

- यसमा annuity table को प्रयोग गरिने,
- annuity table बाट Factor पत्ता लगाई Depreciation Rate निर्धारण गरिने
- Example: cost of machine = 100000, bank interest rate = 5%, life of machine = 8 years
- Then, Annuity factor = Annuity table को ८ वर्षको 5% मा रहेको Factor
- Depreciation = cost of machine * annuity factor

Evaluation Method

- यस विधिबाट Depreciation Calculation गर्दा closing stock – Opening stock गरिन्छ
- **Example**

नेपाल राष्ट्र बैंक- सहायक द्वितीय पदको पाठ्यक्रममा आधारित

@Prajwal Ghimire

year	Closing stock	Opening stock	Depreciation Amount
1.	30000	40000	10000
2.	20000	5000	15000
3.	10000	12000	2000

Per Hr and Per Production Method

- Per unit production rate or per hour rate का आधारमा Depreciation निकालिने

• production	• Per unit rate@0.50	• Per hour rate@0.40
• 5000	• 2500	• 2000
• 6000	• 3000	• 2400
• 7000	• 3500	• 2800

बैंकहरूले कट्टा गर्ने Depreciation

- बैंक तथा वित्तीय संस्थाहरूले Depreciation गर्दा NRB को एकिकृत निर्देशिका, कम्पनी ऐन, आयकर ऐन, Nepal accounting standard, Nepal financial reporting standard, Basel-3 का प्रावधानहरूको अवलम्बन गर्नुपर्ने,
- हाल सबै commercial bank ले Straight line method बाट Depreciation गर्ने गरेका

नेपाल राष्ट्र बैंक- सहायक द्वितीय पदको पाठ्यक्रममा आधारित

@Prajwal Ghimire

- Depreciation गर्दा 5-10000 सम्मको सम्पत्तिको हासकट्टी नगरी सिधै खर्च देखाइने,
- भाडामा दिएका सम्पत्तिहरूको हकमा र WIP का सम्पत्तिको हकमा सम्पत्तिको आयुको आधारमा 25% सम्म Depreciation गरिने,
- Building मा 5% का दरले Depreciation कट्टा गरिने
- Office equipment/computer/software = 20%
- Other intangible assets = 20%
- Historical cost का आधारमा Depreciation गरिने
- Depreciation Rate आयकर ऐन तथा लेखामानमा भएको परिवर्तनका आधारमा परिवर्तन हुने

Inventory Management

जिन्सी/मौज्दात व्यवस्थापन

- The stock of different type of consumable goods held by an organization is called inventory.

Types of Inventory

- Raw Materials —कच्चा पदार्थ
- Work in Progress- अर्ध निर्मित वस्तु
- Finished goods- तयारी मालसामान

Objectives/importance of Inventory Management

- To provide materials continuously- (निरन्तर रूपमा सामग्री उपलब्ध गराउनु)
- To prevent from excessive investment in materials(अधिक लगानी बाट बचाउनु)

नेपाल राष्ट्र बैंक- सहायक द्वितीय पदको पाठ्यक्रममा आधारित

- To prevent the misappropriation of materials(सामग्री हिनामिना हुनबाट बचाउनु)
- To provide information about availability of materials (उपलब्धताको बारेमा जानकारी गराउनु)

Reasons or Motive of Holding Inventory

मौज्दात राख्नुका कारण तथा उद्देश्यहरू

- Transaction Motive- कारोबारको उद्देश्य
- Precautionary Motive- सुरक्षात्मक उद्देश्य: prevention measure taken before occurring in event.
- Speculative Motive- सट्टावाजिको उद्देश्य: Sales at a high price in future/भविष्यमा सामानको मूल्य घट्ने र बढ्ने अनुमानका आधारमा मौज्दात राखिने

Inventory Management techniques

- **Stock level**- ROL, min stock level, max. Stock Level, Average, Danger
- **ABC System**: This method works by identifying the most and least popular types of stock. It is an inventory management technique where inventory items are classified into three categories namely: A, B, and C.
- **Just in Time Inventory**: Companies use this method in an effort to maintain the lowest stock levels possible before a refill. In Just in Time method of inventory control, the company keeps only as much inventory as it needs during the production process.
- **Bin Card System**

नेपाल राष्ट्र बैंक- सहायक द्वितीय पदको पाठ्यक्रममा आधारित

@Prajwal Ghimire

- Bin card is the record maintained under the perpetual inventory system by the stores department and shows the quantities of materials received, issued and balance in hand after each receipt and issue. It is also known as stock card or bin tag.

Store Ledger System- LIFO & FIFO Method

Weighted average Method

Qualitative techniques- Focus on Quality of Inventory

Weighted average Method

- In the calculation of costs of Ending inventory, the same unit costs – the weighted average cost per unit; are assigned to units not sold and to units sold.
- In the calculation of the cost of goods sold, the same unit costs – the weighted average cost per unit; are assigned to units sold and unsold.
- Weighted average cost per unit = $\text{Cost of Goods Sold} \div \text{Units available for sale}$.

Advantages of Weighted average Method

- Assigns an equal unit cost to each unit of inventory.
- It does not produce widely fluctuating profits when inventory costs are fluctuating, as FIFO and LIFO do.

Determination of stock levels/Economic Order Quantity

Economic order Quantity(EOQ) = $\sqrt{2AO/C}$

- Where,
- A= Annual requirement
- O= Ordering cost per order
- C= Carrying cost per unit

Re order point = Lead time * Daily consumption

- Where, Daily consumption = Annual consumption / Days in year
- **Minimum stock level or safety stock level** = Average consumption * Lead time

Or,

- **Minimum stock level** = reorder level – (normal consumption * normal reorder period)
- **Maximum Stock Level** = ROL + ROQ – (Min cons * Min ROP)
- **Re order level** = Maximum Consumption * Maximum reorder period
- **Danger level** = Normal consumption * Maximum period required for emergency purchase
- **Average Stock Level** = Minimum stock level + EOQ/2

Where,

Normal consumption = (max. cons + min cons) / 2

Normal reorder period = (max. rop + min rop) / 2
